

1. what a great teacher  
you've become!

Also, great point abt keeping  
a record long term - I should  
do that!  
2. what is a splinter tuple?

"Megan

1 Thing learned!

Why course evaluations aren't very useful (reals  
for improvement)

1 Thing still unclear!

How to implement with the Wagman Librarians in  
my unit (not just me)

And to do the student satisfaction:

I really liked this session! Very interactive + walking the  
walk.

- we need to expand our evaluation  
assessment to "minor" assessment -

I really excited to change and I  
think my Rafman pattern will explain  
I also enjoyed the examples shown

- Suggestion -

I would have liked to <sup>to</sup> had a handbook

Your presentation of all VERY helpful  
and cost wait to present it to my  
staff - I see a change!!

① I loved that you use a video  
for showing "openurl / finding  
full text through a link resolver"  
instead of explaining it - I will  
try this.

Thanks for being so engaging!

② Still wonder if students can

learn research skills through a  
one-shot. I and that the "learning"  
doesn't stick.

I learned:

... that you articulate the benefits and value of classroom assessment in contrast to the satisfaction-type survey I keep trying to get rid of.  
Thank you.

I still want to know:

... how to convince others that this is useful.

Also:

You have a great strategy for using this info. Very nice presentation!

① I did not know what a one-minute paper is. This session was most helpful in clearly describing this assessment technique. I will simplify my assessments in the future.

② Deeper information will be helpful but I sense that the website will be very useful.

Excellent presentation - very agreeable presentation style.  
Well done!
